If any preprinted information is incorrect, please provide the correct information.

Report actual values. If these are not available, report estimated values.

**1. Total Fuel Used by the Combined Heat and Power System**

Report all fuels consumed by the combined heat and power system for all purposes: power, useful heat, and losses.

Include start-up and flame stabilization fuels.

<b>Energy Source</b> (See codes on pages 6 and 7 in Instructions to add energy sources)	<b>Amount</b> (Enter zero (0) when a fuel source has no fuel consumption for this reporting period)	<b>Type of Physical Units</b> (Tons, Barrels, Thousand Cubic Feet, or Thousand Pounds of Steam)	<b>Heat Value per Unit of Fuel</b> (Million Btus per fuel unit)

State: \_\_\_\_\_ Reporting Month and Year: \_\_\_\_\_

**2. Fuel Used to Generate Electricity**

In the **Total Electricity Generated** line, enter one aggregate number for all prime movers of a single type. For example, all the generation from your steam turbines, no matter how many energy sources, should be reported as one number.

(Prime movers are devices that convert fuel or heat energy into mechanical energy. Examples include steam turbines, combustion turbines, reciprocating engines, and water turbines.)

If there are not enough lines in any of the tables, or if there are not enough tables to represent the number of prime movers, please photocopy the appropriate sheets and include them in your submission.
